

In the crowded world of production knives, Robert Terzuola's martial designs are perfectly summed up by trademark "Nunquam Secundum" the Latin for "Second to None".

Over the last two decades, Terzuola has been widely noted as an industry pioneer in the design and execution of some of the world's finest combat-oriented handmade and production cutlery.

The pragmatic, no-nonsense blades from his workbench are characterized by strength, performance and the unmistakable look that simply defines the term "Tactical".

A proud maker of military knives since World War One, Camillus Cutlery Company is very honored for the opportunity to recreate an original Terzuola fixed blade design for professional adventurers world-wide.

The Close-Quarter Combat Series from Camillus-destined to set a new standard in production combat cutlery.

The CQB-1 sheath is precision formed from KYDEX By Blade-Tech Industries.

The unique design allows a multitude of carrying options due to its unique polymer "TEK-LOK" belt fastener that serves as an adjustable hanger for outside of the waistband/web gear carry. For inside the waistband use, a polymer belt-loop adjustable for belt width is also provided.

The TEK-LOK is much stronger than conventional belt hangers and is user adjustable for belt width, position, and right or left-handed users alike.

KYDEX is the ultimate high-performance sheath material, but because of its tightly molded construction it will mar the blade finish of your CQB-1 over time. We suggest a periodic cleaning of your sheath's interior to reduce scuffing of your knife's finish.

Close Quarter Battle CQB1
Close Quarter Battle (serrated) CQB1S

- 10-7/8" overall length
- 5-3/4" blade
- 5/32" blade thickness
